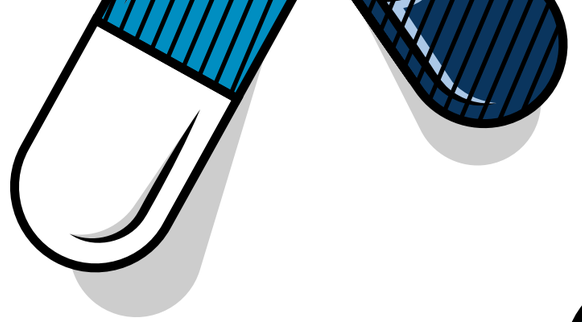
Generics: Great for Drugs, Not for Software

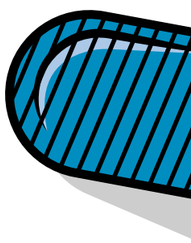
Pharmacists need software built for pharmacy

Today, there are **2x more errors** in distribution than dispensing[1].

Which leads to patients not getting their critical medications and being re-admitted to the hospital[2].

Dispensing software solutions have helped automate the workflow; however, distribution has been ignored.





Adults 65 Years and Over Projected (in Millions)

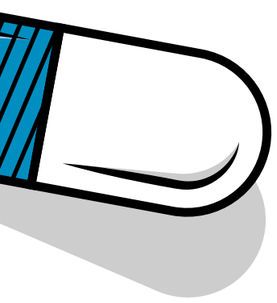
Medication distribution continues to grow, exacerbated by the recent pandemic and **61%** growth in the hospital-at-home movement due to an aging U.S. population[3].



And this is not going away when **60%** of U.S. adults have at least one chronic disease and **40%** have two or more[4].

Number of Adults with a Chronic Disease

Why generic software doesn’t work for pharmacy

Specialty pharmacies have tried to solve the distribution problem using non-healthcare solutions.

However, these fragmented solutions still cause critical distribution errors.... which lead to safety concerns, visibility gaps, payor contract and accreditation challenges, and out-of-control costs.

- Not built for healthcare
- Multiple systems / workflows
- Limited choice on carrier
- Separate or no courier option
- No visibility, disparate communication
- No control over cost optimization
- No insights for improvement
- Multiple, manual invoices

Sound familiar? Don’t worry.
We’ve got the solution.

We get it.

Your specialty pharmacy workflow is complex and unique. So we built something **just for you.**

VPL TrajectRx™

A clinically-minded shipping, tracking, and compliance solution specifically designed to modernize your outbound pharmacy operations from start to finish.

VPL TrajectRx™
